

JUST THE **FACTS**

MidAmerican Energy Iowa Wind-Powered Electric Generation

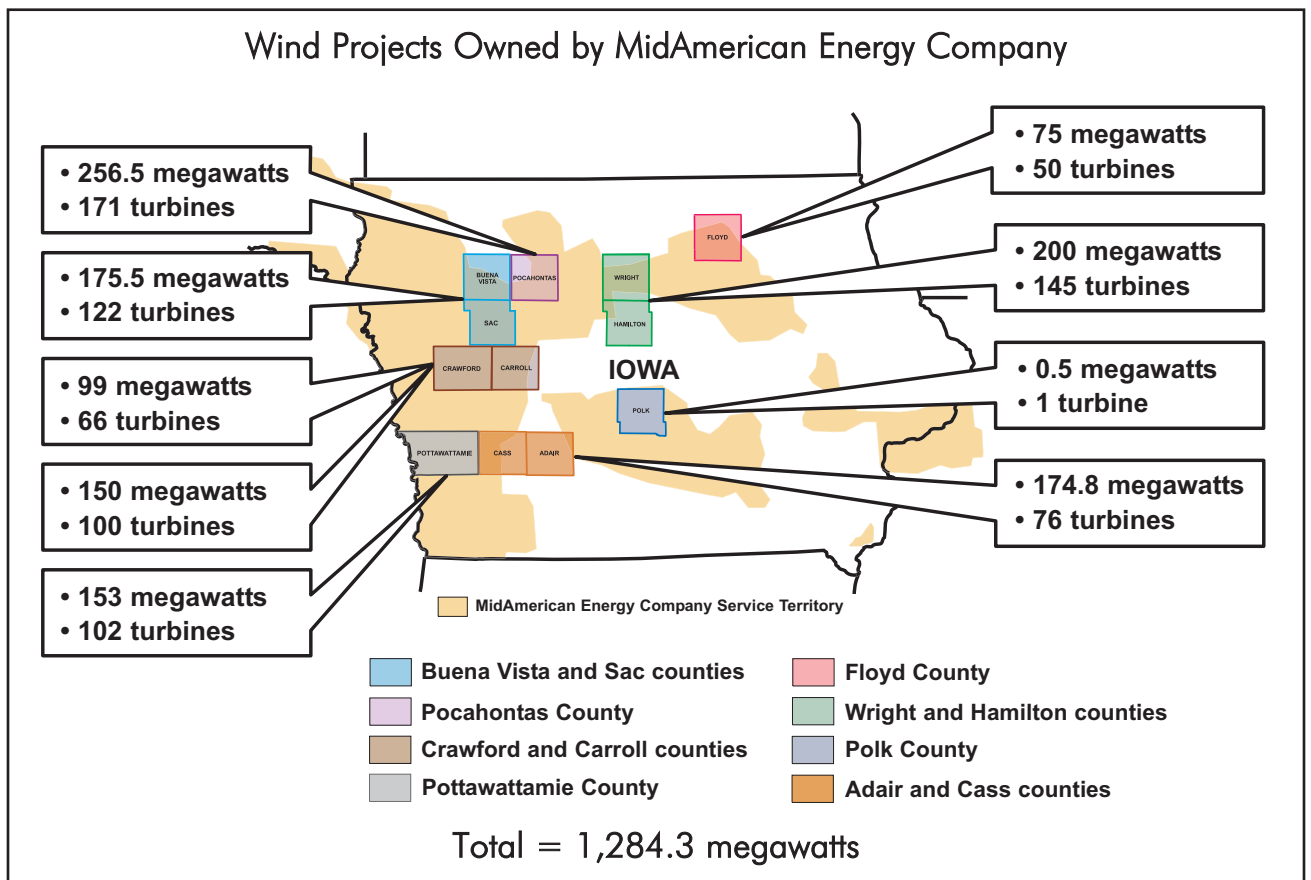

MidAmerican Energy Company is No. 1 in the nation in ownership of wind-powered electric generation among regulated utilities. The company solidified its wind energy leadership by adding 623.3 megawatts of wind generation in Iowa during 2008.

In December 2009, MidAmerican Energy Company received approval from the Iowa Utilities Board to add up to 1,001 megawatts of wind generation prior to 2013 to enhance the company's balanced generation portfolio.

One of MidAmerican Energy Company's wind projects in Iowa

MidAmerican has 1,393.3 megawatts of wind energy facilities in operation in Iowa.

- 1,284.3 megawatts – owned and operated by MidAmerican Energy
- 109 megawatts – power purchase agreement

The existing 1,284.3 megawatts of owned wind energy facilities are located at eight sites in northwest, north central, west central, northeast Iowa and the Iowa State Fairgrounds.

The last electric rate increase MidAmerican Energy's Iowa customers experienced was in 1995, and the company has committed to keeping base electric rates stable.
